

Streamline Your Mechanical Parts Purchase with Fictiv's New Procure-to-Pay Integration

Tired of manually copying and pasting quote information into your Procure-to-Pay system?

Looking for a seamless way to generate your procurement request? Fictiv now offers Punchout integration with Procure-to-Pay (P2P) systems, designed to simplify and streamline your purchasing experience.

What types of P2P integration does Fictiv support?

Fictiv supports Punchout integration with P2P systems that support cXML integrations. Punchout integration streamlines the purchasing process by allowing you to transfer your Fictiv quotes directly into the cart of procurement systems, such as SAP Ariba, Coupa, MS Dynamics 365, and more.

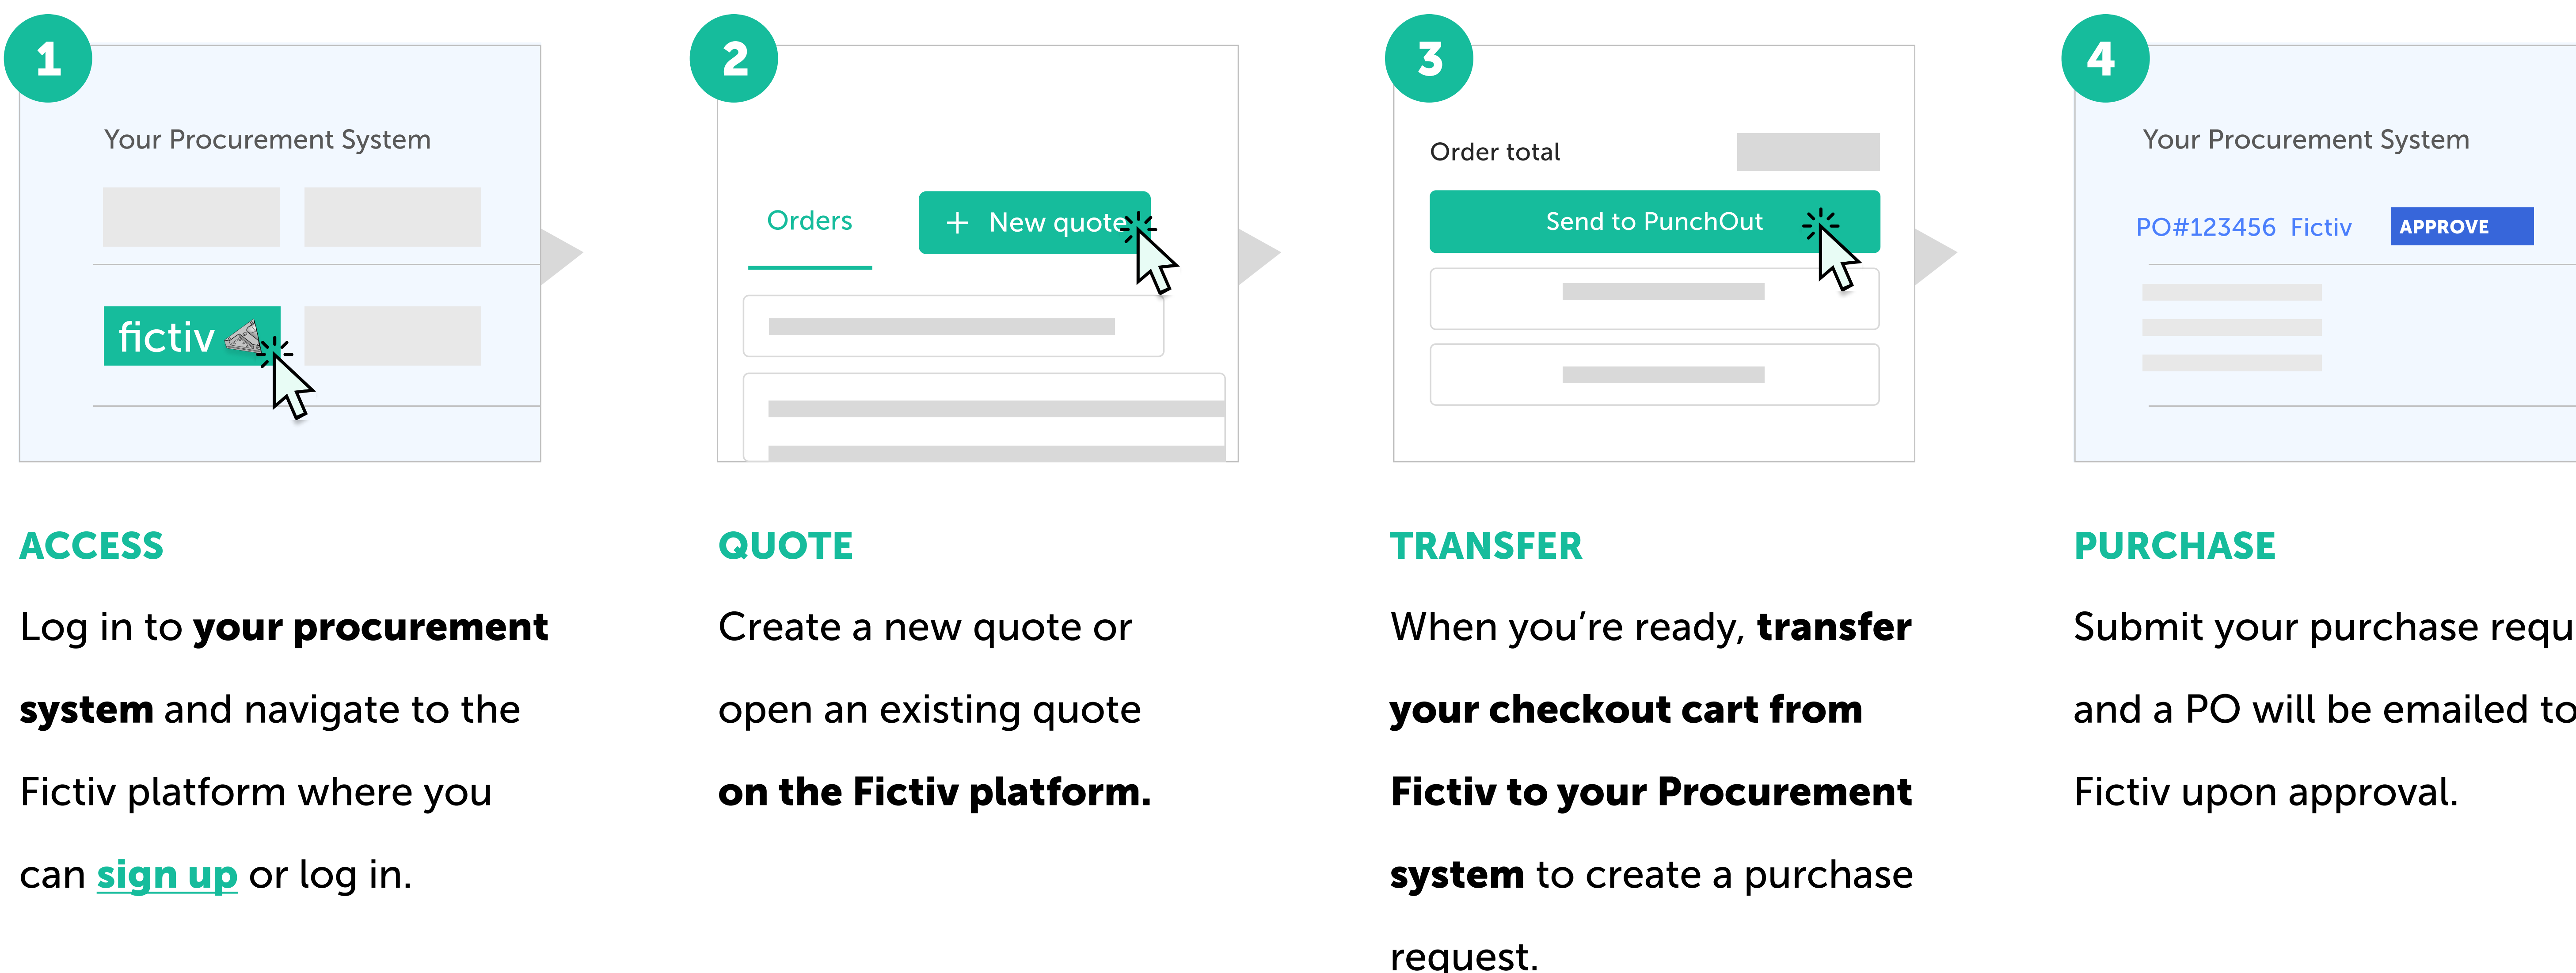

Why use Punchout integration with your P2P system?

Punchout integration with P2P systems eliminates manual data entry and the risk of errors that comes with it. And, your purchase requisitions are automatically generated, which saves you time, too.

How does it work?

First, we'll work with your Procurement or IT team to configure and set up Fictiv as a new Punchout Catalog with your P2P system.

Once setup, you'll follow a few simple steps to utilize the integration:
